

WYNKEN, BLYNKEN AND NOD.
No less an authority than Andrew Lang, says an exchange, has pronounced Eugene Field's poem, "Wynken, Blynken, and Nod," one of the best, if not the very best, child poem in the English language.

Wynken, Blynken and Nod one night
Sailed off in a wooden shoe—
Sailed on a river of misty light
Into a sea of dew.
"Where are you going and what do you wish?"
The old man asked the three.
"We have come to fish for the herring fish
That live in the beautiful sea;
Nets of silver and gold have we,"
Said Wynken,
Blynken,
And Nod.

The old man laughed and sang a song
As they rocked in the wooden shoe,
And the wind that sped them all night long
Buffed the waves of dew.
The little stars were the herring fish
That lived in that beautiful sea.
"Now cast your nets wherever you wish,
But never fear—we are—"
So cried the stars to the fishermen three.

Wynken,
Blynken,
And Nod.
All night long their nets they threw
For the fish in the twinkling foam,
Then down from the sky came the wooden shoe,
Bringing the fishermen home,
"Twas all so pretty a sail, it seemed
As if it could not be,
And some folk thought 'twas a dream
They'd dreamed
Of sailing that beautiful sea,
But I shall name you the fishermen three."

Wynken,
Blynken,
And Nod.
Wynken and Blynken are two little eyes,
And Nod is a little head,
And the wooden shoe that sailed the skies
Is a wee one's trundle bed;
So shut your eyes while mother sings
Of the wonderful sights that be,
And you shall see the beautiful things
As you rock in the misty sea.
Where the old shoe rocked the fishermen three—
Wynken,
Blynken,
And Nod.

They Were After Him.
The other evening Toddletums called his papa to tell him that he couldn't get to sleep for the mosquitoes.
"Never mind, Toddie, just put your head under the clothes, where they can't get at you."
Toddletums did so, but in a little while he peered from under the clothing. A firefly happening along at the moment set him yelling:
"It's no use, papa. I hid under the clothes, and now they've gone off and got lanterns to find me with."
—Harper's Round Table.

First Melon of the Year.
Winkles Chronicle.
Uncle Sam Stokes, colored, is still keeping Wilkes in the lead. He cut the first watermelon of the year on the first day of February, and he would like to know who can beat it. He can furnish seed of the same kind to plant this year. Uncle Sam is hard to head any way.

A Stylish Waist.
This stylish waist is fitted with darts in front which fit fastens in the center under the double box pleat. The back is seamless over a fitted lining.

(No. 7683)
For extra waist of silk this is a good model. Bright plaids with a band of plain bright colored or black velvet on either side of the plaids, and a collar to match, are very serviceable, as they can be worn with a skirt of any color.
The new printed, corded and checked velveteens are used for extra waists and cut to advantage after this pattern. Silk ribbons may be added in lieu of velvet trimmings.
For a costume of one fabric, this waist with a plain skirt is very stylish. A black rough fabric showing a back ground of dark green, would be stylish with the box pleat of black satin, with green velvet ribbons and collar.
A bluish crepe with chene ribbons and miniature buttons is very effective.
The pattern is cut in 6 sizes for 33 to 42 inches bust measure. A medium size requires 5 1/2 yards of 22-inch goods.

Always give number of pattern wanted, and name of the person to whom it should be sent. Give name and address of the person to whom it should be sent. Do not make complaint of non-receipt of pattern until seven days have passed.

HARRISON ON CIVIL SERVICE REFORM.
Filling the Offices is a Distressing Duty, and One Which Weakens a President.

In none of his papers upon "This Country of Ours" has ex-President Harrison delivered himself with such vehemence and emphasis as he has in the one in the March Ladies' Home Journal, "The President's Duties." Besides commending one of Mr. Cleveland's acts, and censuring Ambassadors for making political speeches, he talks of Presidential appointments in a most feeling and almost pathetic way. Upon the latter theme, in giving endorsement to Civil Service Reform, he says: In spite of all the difficulties that beset the question of removals and appointments it must be conceded that much progress in the direction of a betterment of the service has been made. The Civil Service Rules have removed a large number of minor officers in the departments at Washington, and in the postal and other services, from the scramble of politics, and have given the President, the Cabinet officers and the Members of Congress great relief; but it still remains true that in the power of appointment to office the President finds the most exacting, unremitting and distracting of his duties. In the nature of things he begins to make enemies from the start, and has no way of escape—it is fate; and to a sensitive man involves much distress of mind. His only support is in the good opinion of those who chiefly care that the public business shall be well done, and are not disturbed by the consideration whether this man or that man is doing it; but he hears very little directly from this class. No President can conduct a successful administration without the support of Congress, and this matter of appointments, do what he will, often weakens that support. It is for him always a sort of compromise between his ideal and the best attainable thing."

What It Means to Run an Ocean Greyhound.
From Harper's Round Table.
JUST as the government of the city of New York is divided among the Mayor, Aldermen, and boards and commissions of various departments, so the administration of a giant steamship is divided into specialties. The Mayor is the chief officer of the city. The Captain is the chief officer of the ship. He is more than that. From the time he leaves port until she enters port he is master of the life and liberty of every person aboard the ship, as well as of all the property in it. He is an autocrat. Of course he must administer his authority wisely. Unwise autocrats don't last long, whether afloat or ashore.

The head of each department is responsible for all that goes on in it. The first officer is at the head of the crew, or navigating department. The chief engineer directs everything connected with the engines. The chief steward has full control of all that has to do with the comfort of the passengers and crew. Each of these chiefs makes a written report at noon every day. Thus the Captain is kept informed of everything pertaining to the ship's welfare.

Every one of the senior officers of the ship is a duly qualified master, capable of taking her around the world if need be. The day is divided into "watches," or hours of duty, of four hours each. One junior officer is on the bridge with each senior officer on duty. The senior officer directs the ship's course. He never leaves the bridge, while he is on watch. Should he do so he would be dismissed at once. There is no excuse possible. It would be just as if he had died suddenly. His friends would all feel sorry, but nothing could be done to help him. Two seamen are always on watch in the bow of the ship, and two more in the foretop. Twice as many are on the look-out in thick weather. Observations are taken every four hours. In the good old sailing-ship the Captain was content to "take the sun" at noon every day. If the sky was cloudy for a day, two, it really didn't matter much, for he could go along on dead reckoning. But on an ocean greyhound, rushing over the course between New York and Europe at the rate of more than twenty miles an hour, it is highly important that the ship's position be known all the time. Fog may come down at any moment, observations may not be obtainable for ten or twelve hours. The positions of more than a hundred ships are known. By observing any one of these the ship's whereabouts can be ascertained in a few minutes. Of course the "road" becomes more or less familiar to a man who crosses the ocean along the same route year after year. Yet this familiarity never breeds contempt or any carelessness. No man knows all the influences that affect the currents of the ocean. You may find the current in one place the same forty times in succession; on the forty-first trip it may be entirely changed. Sometimes a big storm that has ended four or five hours before the steamship passes a certain place may have given the surface current a strong set in one direction. There is no means of telling when these influences may have been at work save by taking the ship's position frequently.

Fish City—A Unique Settlement.
Fish City which belongs to the State of Michigan, is a peculiar place, with a watery flavor; has no existence in summer, but is a busy place in winter, is not built on land and has nothing to do with boats. The ice of Saginaw Bay is used as a foundation for the city every winter, and the town is occupied by men and their families, who catch, clean and pack whitefish and lake trout for the market. It is built in the same cover every winter, the houses being constructed of rough pine boards. There had a population of nearly three thousand in the winter of 1893-4, nearly twice that number last winter, and this season the population has taken another jump forward.

Gold Find in Montgomery.
Capt. J. C. McCanless returned this morning from Millersville. He tells of a large gold find in Montgomery county this week. Capt. McCanless is representing an English syndicate found a chunk of gold weighing fifty pounds on the plantation of Col. Cotton at Pantops postoffice. Fully half of the chunk is solid gold which makes it worth about \$12,000.
